THE TRUTH LAYER FOR MARKETING.

Arcus is the truth layer for marketing leaders, founders and executives at entertainment and lifestyle brands. It connects the data every team already has, from sales, CRM and player or viewer data to social and agency reports, into one layer the brand owns, adds what audiences say across the internet, checks every claim, and answers any question with the whole picture. It doesn't make ads, buy media or take a cut of spend.

CONNECT

Every piece of your data, in one layer you own.

About three months, inside your own setup, and you approve each step. Answers land in Slack, email, Sheets or your dashboard.

CHECK

Whether your marketing worked, against your own numbers.

Every claimed sale, ticket or sign-up checked once against your own numbers. A regions-on, regions-off test when you need proof.

LISTEN

To your audience, everywhere they talk.

Reddit, TikTok, YouTube, Discord, Twitch, Kick, Goodreads, Fable and more, counted and lined up with your own data.

LEARN

What works, and what to make next.

A few slides with the answer on top, ending in what to keep, test and stop.

Real questions, real answers (names removed)

- **2.4×** the account's average views for one type of post: a trick with the can you could copy tonight (content report, a hard seltzer brand).
- **42×** the views for an acted-out bit compared with a sincere post (audience report, a streaming service).
- **157** sources behind ten slides. Every number links to its page (market report, a skincare brand moving into retail).

What it costs

- First question: $0, plus a 30-minute walkthrough
- Setup, about three months: [$X]
- Monthly answers, checks and listening: [$Y]

What we need to start

- One question you want answered
- Access to the accounts it touches, like your own sales, tickets or sign-ups and, for an agency question, the agency's report

Team: Nazeem Ahmed, Chief AI Officer · Min Kwak, Chief Revenue Officer · Devin Min, Chief Product Officer · Brendon Ghaderi, Chief Technology Officer
